Claim Objections

Claims 2-6 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The above claims do not fairly further limit independent apparatus claim 1 because the above claims recite only limitations dealing with the manner or method in which the claimed apparatus is to be employed (how the electron gun is to be directed around the cold hearth area). It has been well settled that the manner or method of use of an apparatus cannot be relied upon to fairly further limit claims to the apparatus itself. See MPEP 2114 and *In re Casey*, 152 USPQ 235.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by either of Joseph or Entrikin et al. Both of Joseph and Entrikin et al teach a cold hearth melting and refining arrangement including a cold hearth holding a pool of molten metal (20 in Joseph and 10 in Entrikin et al), an electron gun configured to generate an electron beam (24 in Joseph and 14 or 15 in Entrikin et al) and a programmable controller for moving the electron beam in a pattern for evaporating impurities that collect on the pool edge (see col. 5 lines 30-40 for example in Joseph

and col. 4 lines 27-35 for example Entrikin et al) thereby showing all aspects of the above claims since as stated above, with respect to instant claims 1-6, the actual manner in which the electron gun is moved is a limitation directed to the use of the claimed apparatus and cannot be relied upon to further limit claims to the apparatus itself.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by either of Harker'776 or Harker'635. Both of Harker'776 and Harker'635 teach a cold hearth melting and refining arrangement including a cold hearth holding a pool of molten metal (10), an electron gun configured to generate an electron beam (15) and a programmable controller for moving the electron beam in any desired pattern (see col. 2 lines 45-61 of each of Harker'776 and Harker'635 for example), thereby showing all aspects of the above claims since as stated above, the actual manner in which the electron gun is moved is a limitation directed to the use of the claimed apparatus and cannot be relied upon to further limit claims to the apparatus itself.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott Kastler whose telephone number is (571) 272-1243. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on (571) 272-1244. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
